

1. Project Overview

TravelMate is a collaborative travel planning platform designed to help groups organize trips in one centralized place. The product enables travelers to manage trips, collaborate with other members, and reduce the need to switch between multiple third-party applications during trip planning.

2. Problem Statement

User research indicates that more than 50% of travelers experience difficulties coordinating group trips. They frequently switch between messaging applications, spreadsheets, and map services to manage itineraries, expenses, and trip information. This fragmented experience reduces collaboration efficiency, causes inconsistent information, and negatively impacts the overall travel planning experience.

3. MVP Goal - Business Goal

Business Goal:

Provide a centralized travel planning experience that improves collaboration among group travelers and increases user engagement during the trip planning process.

MVP Goal:

Validate whether core trip management and collaboration capabilities effectively solve users' group planning problems before investing in advanced capabilities such as AI recommendations and booking services.

4. In Scope

- Account Management
- Trip Management
- Collaboration

5. Out of Scope

- Itinerary Planning
- Expense Management
- Packing Management
- Booking
- AI Assistance

Reason: Planned for future releases after MVP validation

6. Dependencies

- User authentication service
- Email notification service
- Cloud database
- Stable internet connection

7. Assumptions

- Users have already registered an account.
- Users have internet connectivity.
- Trips are created before collaboration begins.
- Shared members already have TravelMate accounts.

8. Risks

- Low user adoption of collaboration features.
- Changing business priorities during MVP development.
- Limited development resources and timeline.
- Performance issues when multiple users edit the same trip simultaneously.

9. Success Metrics

Metric	Target
Registered Users	Defined by Product Owner after MVP launch
Trips Created per User	≥ 2 trips per active user
Shared Trips per User	≥ 2 shared trips per month
Average Members per Shared Trip	≥ 2 collaborators
Weekly Active Users (WAU)	Target to be defined with Product Owner
User Retention	Improvement target to be confirmed by stakeholders

10. Release Strategy

Phase 1 – MVP

- Account Management

- Trip Management
- Collaboration

Phase 2

- Itinerary Planning
- Expense Management
- Packing Management

Phase 3

- Booking
- AI Assistance
