1. Introduction

This Business Requirements Document (BRD) defines the business requirements for the TravelMate Minimum Viable Product (MVP). It provides a shared understanding among business stakeholders and the project team regarding the business objectives, project scope, business needs, and expected outcomes.

2. Business Background

Current travel planning is fragmented across multiple applications, resulting in poor collaboration and inconsistent trip information. This fragmented experience reduces user satisfaction, decreases planning efficiency, and creates opportunities for competitors offering a more integrated travel planning solution.

3. Business Problem

User research indicates that more than 50% of travelers experience difficulties coordinating group trips. They frequently switch between messaging applications, spreadsheets, maps, and note-taking tools to manage itineraries and trip information. This fragmented workflow causes inconsistent information, duplicated effort, reduced collaboration efficiency, and an overall poor trip planning experience.

4. Business Objectives

- Deliver an all-in-one travel planning platform.
- Improve collaboration among group travelers.
- Reduce dependency on multiple third-party applications.
- Increase user engagement and retention.
- Establish a scalable foundation for future premium features.

5. Business Benefits

The TravelMate MVP is expected to:

- Improve collaboration during trip planning.
- Reduce information fragmentation.
- Increase user engagement.
- Build the foundation for future premium services.

6. Business Scope

The MVP includes the following business capabilities:

- Account Management
- Trip Management
- Collaboration Management

7. Out of Scope

- Itinerary Planning
- Expense Management
- Packing Management
- Booking Integration
- AI Recommendation

8. Stakeholders

Business

- CEO
- Product Owner
- Investor

Project Team

- Business Analyst
- UX/UI Designer
- Developer
- QA Engineer

Operational

- Customer Support
- System Administrator
- Marketing

End Users

- Traveler

9. Assumptions

- Users have already registered an account.
- Users have internet connectivity.
- Trips are created before collaboration begins.
- Shared members already have TravelMate accounts.
- Email service is available for sending collaboration invitations.

10. Constraints

- Trip invitations are sent via email only.
- Only the Trip Owner can manage members and roles.
- Only authenticated users can access trip information.
- Guest access is not supported.
- Shared members must already have a TravelMate account.

11. Risks

- Low adoption of collaboration features.
- Changes in business priorities during MVP development.
- Limited development resources and delivery timeline.
- Email delivery failures affecting collaboration.
- Concurrent updates by multiple users causing data conflicts.

12. Business Process Summary

Travelers register or log in to TravelMate before creating a trip. Once a trip is created, the owner can enable collaboration, invite members via email, and assign roles. Invited members accept the invitation to join the shared trip. The group then collaborates to plan and manage the trip together.

13. High-level Functional Requirements

BR-01: The system shall allow travelers to register and authenticate before accessing TravelMate.

BR-02: The system shall allow authenticated travelers to create and manage trips.

BR-03: The system shall allow Trip Owners to enable collaboration for a trip.

BR-04: The system shall allow Trip Owners to invite existing users via email.

BR-05: The system shall allow invited travelers to join shared trips after accepting invitations.

BR-06: The system shall support role-based collaboration.

BR-07: The system shall allow Trip Owners to manage members and permissions.

BR-08: The system shall maintain an activity history of collaboration actions.

BR-09: The system shall allow travelers to archive, restore, and delete trips.

BR-10: The system shall securely protect user and trip information.

14. Business Rules

- Only authenticated travelers may access trips.
- Only Trip Owners can manage members.
- Members must already have TravelMate accounts.
- A traveler may own multiple trips.
- A traveler may collaborate on multiple trips.
- Only Owners can change member roles.
- Invitations are sent via email only.

15. Success Metrics

Metric	Target
Registered Users	Defined by Product Owner after MVP launch
Trips Created per User	≥ 2 trips per active user
Shared Trips per User	≥ 2 shared trips per month
Average Members per Shared Trip	≥ 2 collaborators
Weekly Active Users (WAU)	Target to be defined with Product Owner
User Retention	Improvement target to be confirmed by stakeholders
